**Lost and found: a tale of luck and equipoise**

Let me share an experience we had recently as a family that taught us how to think rationally and with equanimity while under stress. We had gone to my in-laws' place in Hyderabad during the Dushera holidays. Two suitcases with clothes, a kindle reader and the customary work laptop were in tow. For our return journey we were dropped at the Kucheguda railway station to head back to Bangalore. As we had reached the station a tad early, we settled down with our luggage on a bench on the platform. When the train came we moved the luggage to our seats. I always look forward to train journeys so that I can read books uninterruptedly. I started a book, so did my husband. An hour and some 40 pages later, my husband's phone rang. I could hear my husband's side of the conversation and see his expressions. His expression was turning quizzical. The call was from RPF who found the laptop and other sundry items which we had left in Kacheguda. We had a situation to deal with.....

Read the following passage and select the correct meaning of the underlined words: (Q. 66-70)

The risk-neutral valuation principle states that a derivative can be valued by (a) calculating the expected payoff on the assumption that the expected return from the underlying asset equals the risk-free interest rate and (b) discounting the expected payoff at the risk free interest rate. When interest rates are constant, risk-neutral valuation provides a well-defined and unambiguous valuation tool. When interest rates are stochastic, it is less clear-cut. Here, the theoretical underpinnings of risk-neutral valuation when interest rates are stochastic are explained. Martingales and measures are critical to a full understanding of risk-free neutral valuation.
