Name & Signature of the Invigilator	PAPER - II	OMR Answer Sheet No. :			0	Question
	DEC-21/04	Roll No. :			~3	Booklet
		(in figures as in Hall Ticket)			-	Set
		Roll Number in words :			ത	S
						No
Time : 2 Hours	No. of Pri	nted Pages : 20		[Maxi	mum Marks :	20
	Instruction	s for the Candidates	W			
2. This paper consists of one hundred 3. At the commencement of examinati booklet and compulsorily examine i (i) To have access to the Question sticker seal and do not accept (ii) Tally the number of pages and due to pages/questions missin by a correct booklet from the ir nor any extra time will be giver (iii) After this verification is over, the Number should be entered on 4. Each item has four alternative response against each item. Example: A	on, the question booklet as below: n Booklet, tear off the part of	t will be given to you. In the first aper seal on the edge of this countries the booklet with the information serial order or any other discrepted of 5 minutes. Afterwards, new should be entered on the OMR C) and (D). You have to darker esponse. IR Answer Sheet under Paper II not be evaluated.	t 5 minute over page. printed of pancy sho ither the 0 Answer S of the oval:	s, you are request. Do not accept the cover payould be got repounded and the Coas indicated before you mark you were Sheet, ex	ot a booklet wife ge. Faulty boo blaced immedi let will be repl DMR Answer S elow on the co ur response a	thou klet atel ace shee orrec
change of response by scratching of the screen of the scratching of the screen of the scratching of the screen of the scratching of the sc	R Answer Sheet to the in all. You are however, allow in a control of the control	nvigilator at the end of the exa owed to carry original question	mination c	ompulsorily ar	nd must not ca py of OMR An	arry swe
1. આ પાનાની ટોચ પર દર્શાવેલી જગ્યામાં ત						
		ાધા જ પ્રશ્નો ફરજિયાત છે.				
 આ પ્રશ્નપત્રમાં બહુવૈકલ્પિક ઉત્તરો ધરાવતા ર 3. પરીક્ષાની શરૂઆતમાં આપને પ્રશ્નપુસ્તિકા કરવું : 						ારીક્ષ
(i) પ્રશ્નપુસ્તિકાનો વપરાશ કરવા માટે ર પ્રશ્નપુસ્તિકા સ્વીકારશો નહીં.	મા કવર પૃ ષ્ઠની ધાર પર આ	પેલ સીલ સ્ટીકર ફાડી નાખો. કોઈપણ	સંજોગોમાં	સીલ સ્ટીકર વગર	રની કે ખુલ્લી

LIFE SCIENCES Paper – II

1.	 Identify the incorrect statement with respect (A) Red muscle is rich in myoglobin. (B) Red muscle is rich in enzymes of Kreb's (C) Red muscle makes lot of lactic acid. (D) Red muscle undergoes slow rate of content 	сус	sle.
2.	A plant biologist interested in developing seemutations in a number of specific genes and the mutant plants have impaired seed developme (A) Forward genetics (B) Reverse genetics (C) Both forward and reverse genetics (D) Neither forward nor reverse genetics	nen d	determines which of the resulting gene
3.	An amino acid residue was substituted in secondary structure of the protein can be st (A) UV-Visible absorption spectroscopy (C) ESR spectroscopy	udie (B)	d using which technique?
4.	Which radiation does not change its direction (A) α radiation (C) β^- radiation	(B)	ile passing through a magnetic field ? β+ radiation X-rays
5.	Po (atomic mass 216 and atomic number 8 mass 212 and atomic number 84). $^{216}_{84}\text{Po} \rightarrow \rightarrow \rightarrow ^{212}_{84}\text{Po}$	34) ι	undergoes decay to form Po (atomic
	What radioactive particles are emitted in this		
	(A) $2\alpha + 2\beta_{+}$		$\alpha + \beta^{-}$
	(C) $2\alpha + 2\beta$	(D)	$\alpha + 2\beta^{-}$

6. Removal of anthers from the bisexual flower before the anther is mature is known as

(A) Fertilization

(B) Emasculation

(C) Hybridization

(D) Sterilization

7.	The amino acids present in a peptide, which experiment are	canı	not be distinguished in a MALDI-TOF
	(A) Lysine and Glutamic acid	(B)	Leucine and Isoleucine
	(C) Isoleucine and Glutamic acid	(D)	Lysine and Leucine
8.	Which of the following techniques can be used	to fi	nd free radical content in a sample?
	(A) Atomic absorption spectroscopy	(B)	ESR spectroscopy
	(C) NMR spectroscopy	(D)	Raman spectroscopy
9.	COVID-19 does not possess reverse transcr	riptas	se. Why ?
	(A) Its genetic material is not RNA		
	(B) Its genetic material is double stranded F	NA	
	(C) Its genetic material is positive sense sing	gle s	tranded RNA
	(D) Its genetic material is negative sense sir	ngle :	stranded RNA
10.	What is the function of DNA Polymerase- α in	n eul	caryotic replication ?
	(A) Replication of leading strand	(B)	Replication of lagging strand
	(C) Priming DNA synthesis	(D)	Replication repair
11.	AGAMOUS gene is involved in the developm	nent	of
	(A) Leaf development		Shoot development
	(C) Carpel development	(D)	Root development
12.	Ribosomes were isolated from bacteria grown bacteria grown in a light medium (12C and 1 in vitro system actively engaged in protein syllater and was analysed by density gradient ribosomes would you expect to see in the de	⁴N). nthes cent	These ribosomes were added to an sis. An aliquot removed several hours trifugation. How many bands of 70S
	(A) 2 (B) 4	(C)	6 (D) 8
13.	How does Diphtheria toxin inhibit translation (A) Inhibits peptidyl transferase in the large (B) Inhibits aminoacyl tRNA binding to small (C) Being aminoacyl-tRNA analog causes per	ribos sub	omal subunit unit

(D) ADP ribosylates eEF2 to cause its catalytic inactivation

(B) Hsp70

14. Which heat shock protein works both as chaperone and protease?

(A) Hsp60

	(C) Hsp100	(D)	Hsp40
15.	In a centrifugation experiment, if the rotor of What is the kind of change expected in the F (A) Increases by two fold (C) Increases by four fold	RCF (B)	
16.	Following are the various events that occur plants. Identify the correct order. 1. PCD of haploid megaspores 2. MMC formation 3. Movement of the polar nuclei towards the description of the embryo sac 5. Functional Megaspore (FM) formation 6. Egg cell formation (A) 2, 1, 5, 3, 4, 6 (C) 1, 3, 5, 4, 6, 2	e ce	
17.	During pregnancy which of the following hormon (A) Estrogen (C) Oxytocin	(B)	maintains integrity of the uterine wall ? Progesterone Prolactin
18.	While separation of a protein mixture, a prote two other proteins, one with a similar molecular a molecular mass of 120 kD and pl of 6.5. Su (A) By size exclusion chromatography only (B) By size exclusion chromatography follow (C) By ion exchange chromatography (D) By affinity chromatography only	ır ma ıgge:	iss and pl of 7.0 whereas the other has st a procedure to purify the protein.
19.	Plasma membrane bound aquaporins functi (A) Mercury (C) Ammonium Sulphate	(B)	an be inhibited by Sodium Chloride Calcium Carbonate

20. Which method was used to sequence the human genome?

(A) Cytogenetic mapping(B) Shotgun sequencing(C) Chromosome walking(D) Radiation hybrid mapping

21.	Which one of the following macromolecule is often used to establish family trees for organisms because it is present in all organisms and does not accumulate mutations quickly?							
	(A)	rRNA		(B)	Fibrin	o peptides		
	(C)	Chloroplast DNA		(D)	Mitoc	hondrial DN	IA	
22.	Acti	on of topoisomer	ase leads to ch	anges in				
	(A)	Linking number of	of ss linear DNA	\				
	(B)	Linking number of	of ds linear DNA	4				
	(C)	Linking number of	of closed circula	ar ss DNA				
	(D)	Linking number o	of closed circula	ar ds DNA				
23.	Wha	at is the melting to	emperature of t	he following	PCR p	rimer ?		
	5′-A	TCGATCCTTAG	GATAGCG-3'					
	(A)	52°C	(B) 56°C	(C)	60°C		(D)	65°C
24.	Forr	mation of seed wi	thout fertilizatio	n is called				
	(A)	Apomixis		(B)	Parth	enocarpy		
	(C)	Vegetative repro	duction	(D)	Sexua	al reproduct	ion	
25.	Wok	oble pairing occur	rs between					
	(A)	1st nucleotide of o	codon and 3rd ni	ucleotide of	anticod	on		
	(B)	3 rd nucleotide of o	codon and 3rd no	ucleotide of	anticod	on		
	(C)	3 rd nucleotide of o	codon and 1st nu	ucleotide of	anticod	on		
	(D)	1 st nucleotide of o	codon and 1st nu	ucleotide of	anticod	on		
26.	Test	tosterone is synth	nesized by whic	h of the folk	owing?			
	(A)	Seminiferous tub	ules	(B)	Inters	titial cells		
	. ,	Vas deferens		(D)		ate gland		
		The section of the se	sa ji sa kata <u>Sana shiyara Bery</u> a a ƙa	를 하실하면 기술의 <i>함</i>				eng tiplete bestere jiha

27. Which of the following prokaryotic organism has largest genome known till date?

A.	er i g									
33.	of b (A) (B) (C)	Condensation of pyruvate with arginine /hich of the following quantitative proteomics method utilises light and heavy versions f biotinylated iodoacetamide reagent to label the proteome sample ? A) Protein microarrays B) Isotope coded affinity tag C) Metabolic stable isotope coding D) Enzymatic stable isotope coding								
32.	2. Agropine is formed by the (A) Condensation of alpha ketoglutarate with arginine (B) Phosphodiester of sucrose and L-arabinose (C) Condensation of glutamate with mannose (D) Condensation of pyruvate with arginine									
31.	(A)	o rejected the concept of abiogenesis ve Louis Pasteur John Needham	(B)	st time ? Francesco Redi John Tyndall						
30.	for (A)	cording to the Histogen theory of apical meri the formation of Epidermis Vascular structures	(B)	development, plerome is responsible Cortex Hypodermis						
29.	(A) (B) (C)	exidation of 6 molecules of glucose by pentose phosphate pathway produces the A) 6 molecules of pentose, 6 molecules of NADPH and 6 molecules of CO ₂ B) 6 molecules of pentose, 12 molecules of NADPH and 6 molecules of CO ₂ C) 12 molecules of pentose, 12 molecules of NADPH and 6 molecules of CO ₂ D) 8 molecules of pentose, 6 molecules of NADPH and 6 molecules of CO ₂								
28.	to s (A)	ne pathogens have spread on the large are top them from entering the newer area. Exclusion Avoidance	(B)	en which principle you need to apply Eradication Protection						
		Bradyrhizobium japonicum Saccharomyces cerevisiae		Myxococcus xanthus Sorangium cellulosum						

34.	During the isoelectric focusing (IEF), a (pl) will migrate towards the		
	(A) Center of the gel		Anode
	(C) Cathode	(D)	Stop migrating
35.	In yeast-two hybrid system, the prey lib into the vector adjacent to the DNA transcription factor Gal4 and then intro (A) Transcription activation (B) DNA binding (C) Ribosome-binding (D) Calmodulin-binding	sequence	for the domain of the
36.	Which one out of the following is not a	connectin	g link ?
	(A) Peripatus		Archeapterix
	(C) Trypanosoma	(D)	Balanoglossus
37.	Which one of the following is converted in nuclei for water droplet formation, contribute atmosphere? (A) Dimethyl sulphoniopropionate (B) Dimethyl sulphide (C) Dimethyl sulphate (D) Dimethyl sulphoxide		• •
38.	What is the major difference between contrast microscopy ?	•	
	(A) Light source		Path of light
	(C) Lamda of light	(D)	Sample preparation
39.	Select the wrong statement about MHC (A) MHC molecules are recognised by (B) MHC molecules are known as HLA (C) MHC molecules are highly polymo (D) MHC molecules are secreted by T	r T-cells A in humar Irphic	

- 40. A thymocyte is a
 - (A) Hematopoietic progenitor cell
 - (B) Lymphocyte within the thymus
 - (C) Thymic epithelial cell
 - (D) Cortical epithelial cell of the thymus
- **41.** According to ABC mode of flower development, what will be the flower organization if A class of gene is mutated
 - (A) sepal-sepal-carpel-carpel
 - (B) sepal-petal-carpel-carpel
 - (C) sepal-petal-stamen-carpel
 - (D) carpel-stamen-stamen-carpel
- 42. Which one of the following is correct statement about Nitric oxide (NO)?
 - (A) Nitric oxide (NO) is a secondary messenger and able to diffuse across cell membrane. It acts as vasodilator and increases blood flow to lower the blood pressure.
 - (B) Nitric oxide (NO) is a primary messenger and unable to diffuse across cell membrane. It acts as vasodilator and increase blood flow to lower the blood pressure.
 - (C) Nitric oxide (NO) is a tertiary messenger and able to diffuse across cell membrane. It acts as vasoconstrictor compound and increases the blood pressure.
 - (D) Nitric oxide (NO) is a neurohormone and unable to diffuse across cell membrane. It acts as vasoconstrictor compound and increases blood flow to increase blood pressure.
- **43.** During the embryonic development, at morula stage embryo contains inner cell mass and outer cell mass. What is the future of inner and outer cell mass?
 - (A) Embryo and fetus from inner cell mass, whereas placenta from outer cell mass
 - (B) Chorionic membrane from inner cell mass, whereas amniotic membrane from outer cell mass
 - (C) Amniotic membrane from inner cell mass, whereas yolk-sac and fetus from outer cell mass
 - (D) Chorionic membrane from inner cell mass, whereas placenta and yolk-sac from outer cell mass

44.	In children	, when	hypothyro	oidism is	associated	with	physical	and	mental	retarda	ıtion,
	collectively	knowr	n as								

(A) Goiter

(B) Gigantism

(C) Cretinism

(D) Myxedema

(C) Banana (D) *Rhizoctonia*

45.	What happens to the root, if the QC cells of (A) New QC is formed by the stele cells (B) New QC is formed by the procambium c (C) The root continues growing without any (D) New QC is formed by the root cap cells	ells	
46.	After the treatment of drug in cell culture, which to study the phosphorylation status of specific (A) Western blot analysis (B) Colony hybridization (C) Array CGH technique (D) DNA fingerprinting		• • • • • • • • • • • • • • • • • • • •
47.	The wavelength of fluorescent light is always - is stated by (A) Lamberts law		ater than that of the exciting radiation Mikhael Tsvet
	(C) Stokes law	(D)	Mullis law
48.	What is the mechanism of anticoagulant actions (A) Inhibits thrombin from acting on fibrinogo (B) Inhibits platelets (C) Inhibits fibrin (D) Chelates calcium ions		of sodium oxalate ?
49.	Which one of the following is the function of (A) Processing and glycosylation of proteins (B) Amino acid metabolism (C) Nucleic acid metabolism (D) Lipid metabolism		Golgi apparatus ?
50.	Viviparous nature of seed germination occur (A) Mango (B) <i>Rhizophora</i>	s in	

- **51.** A transcription unit is 8000 nucleotides long. If only 15% of this unit is exon, calculate the approximate molecular weight of the protein encoded.
 - (A) 40 kDa
 - (B) 44 kDa
 - (C) 1200 kDa
 - (D) 100 kDa
- **52.** Colocalization of two fluorescently labelled proteins in an organelle in the cell is usually visualised by
 - (A) Phase contrast microscopy
 - (B) Scanning electron microscopy
 - (C) Atomic force microscopy
 - (D) Confocal microscopy
- **53.** A linear DNA is 100% labelled at one end and has three restriction sites for EcoRI. If it is partially digested by EcoRI so that all possible fragments are produced, how many of these fragments will be labelled and how many non-labelled?
 - (A) 4 labelled; 6 unlabelled
 - (B) 4 labelled; 4 unlabelled
 - (C) 3 labelled; 5 unlabelled
 - (D) 3 labelled; 3 unlabelled
- **54.** A cell, cytoplasm having a water potential (ψ_w) of 0.732 MPa was kept in 0.1 M $(\psi_w-$ 0.244 MPa) sucrose solution for attaining equilibrium. The movement of water molecules is
 - (A) The movement of water molecules from the cell to sucrose solution
 - (B) The movement of water molecules from sucrose solution to the cell
 - (C) No movement of water molecules
 - (D) Sucrose moves into the cell
- 55. The frequency of crossing over between any two linked genes is
 - (A) Higher if they are recessive
 - (B) Proportional to the distance between them
 - (C) Determined by their relative dominance
 - (D) The same as if they were not linked

56.	The ovules that are completely inverted so that the micropyle is facing downward an situated near the base of the funiculus are called						
	(A) Anatropus ovule	(B)	Orthotropus ovule				
	(C) Campylotropous	(D)	Amphitropous				
57.	The menstrual cycle in mammals is regulate (A) Progesterone and estrogen (B) Follicle stimulating hormone and leutiniz (C) Follicle stimulating hormone and estrogen (D) Consideration and estrogen	ing h					
	(D) Gonadotropin and estrogen						
58.	What is the approximate molecular mass of a p	rotei	n with 250 amino acid residues ?				
	(A) 27500 daltons	(B)	25000 daltons				
	(C) 13500 daltons	(D)	12500 daltons				
59.	CLAVATA (CLV) genes are expressed in						
	(A) Sieve elements	(B)	Tracheary elements				
	(C) Wood parenchyma	(D)	Shoot apical meristem				
60.	Which cellular organelle is most active in ap-	opto	sis?				
	(A) Nucleus	(B)	Ribosome				
	(C) Mitochondria	(D)	Golgi body				
61.	Which cells secrete hydrochloric acid in the	stom	each?				
	(A) Parietal cells	(B)	Foveolar cells				
	(C) Chief cells	(D)	G cells				
62.	Which one of the following is a function of th	e DN	NA Helicase ?				
	(A) Unwinding of the double helix at the repl(B) Synthesis of new DNA strand(C) Facilitates joining of DNA strands to						
	phosphodiester bonds (D) Acts as template to catalyze the synthesis of	shor	rt RNA or DNA segments called primers				
	of DNA replication						

63.	Which one of the following cor	nbinations of	nutrients	follow	sedimentary	pattern	O
	biogeochemical cycling?						

- (A) Phosphorus and Nitrogen
- (B) Carbon and Sulphur
- (C) Nitrogen and Carbon
- (D) Sulphur and Phosphorus

64.	Which one of the following statistical methods is ideal to validate experimental data of
	Mendel's work?

(A) Chi-square test

(B) t-test

(C) Bootstrap analysis

(D) ANOVA

65. Xenobiotics are

- (A) Special soil amendment used in organic farming
- (B) Synthetic organic compounds not found in nature
- (C) Products used for the biological control of pests
- (D) Any chemical that contains carbon

66. Match the List – I with the List – II and select the correct answers using the codes given below.

List - I

List - II

- 1. Apical Meristem
- a. Cambium
- 2. Lateral Meristem
- b. Internode
- Z. Lateral Mension
- **n**
- Intercalary Meristem c. Root apex
 Secondary Meristem d. Cork cambium
- (A) 1-a, 2-b, 3-c, 4-d
- (B) 1-b, 2-c, 3-d, 4-a
- (C) 1-c, 2-a, 3-b, 4-d
- (D) 1-d, 2-a, 3-b, 4-c

67. FISH analysis is useful for determining the

- (A) Chromosomal location of a gene
- (B) Order of DNA fragments in a YAC
- (C) Pattern of expression of a cloned gene
- (D) Map order of closely linked genes

- 68. Which one of the following is a tumor suppressor gene?
 - (A) p53

(B) ALK

(C) AKT-2

- (D) RAS
- 69. Shannon-Wiener index is used for the estimation of
 - (A) Amount of energy transfer from one trophic level to another
 - (B) Total biomass of an ecosystem or any of its components at a given time
 - (C) Species diversity in an ecological community
 - (D) Rate of generation of biomass in an ecosystem
- 70. What causes a growing green plant to bend towards the light?
 - (A) Chloroplasts moves towards light
 - (B) Shoot apex grows towards heat
 - (C) Auxin accumulates on the shaded side, which causes cell elongation
 - (D) The cells grow faster on the lighted side
- 71. The nucleosome contains
 - (A) Proteins and ribonucleic acids
 - (B) DNA and non-histone proteins
 - (C) DNA coiled around the core of histones
 - (D) Ribosomal RNA and ribosomal proteins
- 72. The Agenda-21 of Rio Summit-1992 was related to
 - (A) Reduction of green house gas emission
 - (B) Combating the consequences of ozone depletion
 - (C) Mitigation of desertification
 - (D) To achieve global sustainable development
- 73. Which one is not a consequence of eutrophication in the water bodies?
 - (A) Reduction of light penetration due to the Algal blooms, reducing growth and causing death of plants in littoral zones
 - (B) Lowering the success of predators
 - (C) Lowering of pH and increased diversity of aquatic organisms
 - (D) Depletion of oxygen and loss of key species

74.	 (A) According to all morphological characters (B) According to the similarities of floral characters (C) In the order of their increasing complexities (D) According to their evolutionary relationships 		
75.	5. Under unfavourable conditions plants increase the production of		
	(A) Auxin	(B)	Auxin and Abscisic acid
	(C) Abscisic acid and Ethylene	(D)	Ethylene and Gibberelin
76.	Which one of the following is called pacema	ker c	of the heart ?
	(A) AV node	(B)	AV septum
	(C) Chordae tendineae	(D)	SA node
77.	In human body, which artery carries impure	bloo	d ?
	(A) Pulmonary artery	(B)	Carotid artery
	(C) Renal artery	(D)	Hepatic artery
78.	The antidiuretic hormone Vasopressin is see		, ,
	(A) Pituitary gland	` '	Liver
	(C) Kidney	(D)	Pancreas
79.	Portal vein carries blood from which organ to		_
	(A) Kidney to liver		Digestive system to liver
	(C) Liver to heart	(D)	Liver to kidney
80.	Where does the reabsorption of glucose occ	ur in	a nephron ?
	(A) Loop of Henle		
	(B) First half of the proximal tubule		
	(C) Distal convoluted tubule		
	(D) Second half of the proximal tubule		
81.	The antibodies of which animal lack light cha	ains '	?
	(A) Buffalo	(B)	Kangaroo
	(C) Camel	(D)	Horse

82. Which animal among the following does not require to drink water in its entire lifetime?

	(A) Desert cat (C) Camel	(D) Kangaroo rat		
83.	Where are the tropical rain forests found in (A) Andamans (C) Madhya Pradesh	India ? (B) Himachal Pradesh (D) Arunachal Pradesh		
84.	Sundarbans are known for what kind of for (A) Tropical rain forests (C) Deciduous forests	ests ? (B) Mangrove forests (D) Pine forests		
85.	What would be the best method to estimate (A) By estimating total protein levels (B) By estimating total DNA levels (C) By estimating total ATP levels (D) By estimating total carbon levels	e the amount of living microbial mass?		
86.	Telomerase is a type of (A) DNA polymerase (C) Reverse transcriptase	(B) RNA polymerase (D) Ligase		
87.	 The oncogenic transformed cells have properties similar to those of malignant tumo cells, including all Except (A) Ability to grow unattached to extracellular matrix (B) Reduced requirement for growth factors (C) Secretion of plasminogen activator (D) Gain of actin microfilaments 			
88.	During leaf primordium development, trans by the activity of (A) WUSCHAL and CLAVATA expression apical meristem respectively (B) KNOT gene expression in the shoot apical (C) Auxin accumulation in the shoot apical (D) KNOX gene expression in the shoot apical	n the rib zone and central zone of the shoot pical meristem meristem		

	(A) Actin filaments(C) Synaptic vesicles	(B)	G-proteins Diffusion
90.	Which of the following amino acid was not four (A) Glycine (C) Methionine	(B)	pe synthesized in Miller's experiment ? Aspartic acid Alanine
91.	While using any pair of carbon compounds the bacteria shows growth. (A) Diauxic (B) Continuous (C) Batch (D) Synchronous	as Io	ng as other nutrients are not limiting,
92.	The sodium-potassium pump is called an el (A) Ionizes sodium and potassium atoms (B) Pumps hydrogen ions out of the cell (C) Is used to drive the transport of other m (D) Contributes to the membrane potential		
	In the endosymbiont hypothesis for the origin is proposed as the role of cyanobacteria? (A) They became the chlorophyll of plant cets (B) They are the ancestors of mitochondria (C) They are the ancestors of the chloroplas (D) They lose their DNA and become the value.	ells st	
	Who were awarded the Nobel Prize in 2017 for controlling the circadian rhythm? (A) Jeffrey C. Hall, Michael Rosbash and M (B) Jeffrey C. Hall, Michael Rosbash (C) Michael W. Young and Jeffrey C. Hall (D) Michael Rosbash and Michael W. Youn	ichae	

95.	Which one of the following organisms is reported in spreading of Nipah, Hendra, Ebola, SARS viruses?			
	(A) Bats	(B)	Bacteriophages	
	(C) Monkeys	(D)	Birds	
00	Results on double stranded DNA sequence a	analı	usis showed the content of adenine A	
90.	is 20%. What is the amount of G and C put to			
	(A) 80%		60%	
	(C) 40%		30%	
	(0) 4070	(-)		
97.	Name the end product of β -oxidation of fatty			
	(A) FAD	(B)	Acetyl CoA	
	(C) NAD	(D)	Malonyl CoA	
98	Which of the following is the largest Nationa	l Par	rk in India ?	
30.	(A) Hemis National Park			
	(B) Sundarban National Park			
	(C) Kaziranga National Park			
	(D) Gir National Park			
	(b) dii Nationan an			
99.	Which of the following is a macromolecule?			
	(A) Fatty acid	` '	Sugar	
	(C) Nucleic acid	(D)	Amino acid	
100	Lack of cuticle, single layered epidermis, presence	e of a	air cavities in the cortex poorly developed	
100.	vascular system and lack of mechanical tissues			
	(A) Xerophytes		Hydrophytes	
	(C) Epiphytes	(D)		
	(5)	(-)		
		and the second state of the second	neres de la consequencia della consequencia della consequencia della consequencia della c
